Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                  source
                                                                                                                                                                                          Address for correspondence: kaos@kasusa.or.jp
For the latest information on annotation of this clone, please see
http://www.kazusa.or.jp/Kaos/cgi-bin/agd graph.cgi?c=K15122
Genes with similarity to proteins in the databases are described in
'product' or 'note' qualifiers. Genes that have no significant
protein similarity are described as 'unknown protein'.
The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
http://compbio.orml.gov/Grail-1.3/),
GENSCAN (Chris Burge, MIT, http://CCR-081.mit.edu/GENSCAN.html),
NetGene2 (S.M. Hebbggaard, et al., CBs, Technical University of
Denmark, http://www.cbs.dtu.dk/services/NetGene2/) and
SplicePredictor (Volker Brendel, Stanford University,
http://gremlinl.zool.iastate.edu/cgi-bin/sp.cgi).
Genes encoding tRNAs are predicted by tRNAscan-SE
(Sean Eddy, Washington University School of Medicine, St. Louis,
http://genome.wustl.edu/eddy/tRNAscan-SE/).
This sequence may not be the entire insert of this clone. It may be
shorter because we remove overlaps between neighboring submissions.
The 5' clone is MRA19 and the 3' clone is MCL19.

The sequence also contains the SAG12-1 gene 5'-untranslated region, and has been linked to a cytokinin biosynthesis isopentenyltransferase gene and NOS terminator for senescence-specific gene expression in a transgenic plant. The resulting transgenic plant shows delayed senescence, and shows longer vegetative growth, producing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Senescence associated gene promoters, SAG12 and SAG13, - useful for producing genetic constructs for producing transgenic plants having delayed senescence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Match

The senescence associated promoters are useful for the creation of transgenic plants with altered senescence characteristics. Genetic constructs can be inserted into plants which become effective only upon plant cells entering senescence. For example, a gene encoding a biosynthetic enzyme under the control of a senescence specific promoter can be inserted into a plant, without having the tissues of the plant exposed to the excess of cytokinin during presences approach. Then at the onset of senescence, the senescence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a genetic construct comprising senescence specific promoter, preferably senescence associated gene (SAG)-12 promoter operably connected to a protein-coding DNA sequence not natively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       specific promoter activates cytokinin production to alter the progression of senescence in the plant. The present sequence is a chimeric construct comprising Arabidopsis thaliana SAGI2 promoter, isopentenyl transferase (IPT) gene and NOS-ter sequence. Note: This sequence is stated to be same as that shown as SEQ ID NO:1 (AAD33336) in Column 15-20 of the specification. However the sequences differ at several positions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 3183 BP; 1042 A; 528 C; 559 G; 1054 T; 0 U; 0 Other;

The invention relates to a genetic construct comprising senescence specific promoter, preferably senescence associated gene (SAG)-12 promoter operably connected to a protein-coding DNA sequence not natively connected to the promoter. The senescence associated promoters are useful for the creation of transgenic plants with altered senescence characteristics. Genetic constructs can be inserted into plants which become effective only upon plant cells entering senescence. For example, a gene encoding a biosynthetic enzyme under the control of a senescence-specific promoter can be inserted into a plant, without having the tissues of the plant exposed to the excess of cytokinin during presentissues of the plant exposed to the excess of cytokinin during presentific promoter activates cytokinin production to alter the progression of senescence in the plant. Then at the onset of senescence, the senescence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Arabidopsis thaliana Unidentified.
                                                                                                                                                                                                                         Novel senescence associated promoter sequence connected to coding DNA sequence useful for the creation of transgenic paltered senescence characteristics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   senescence-specific promoter; senescence isopentenyl transferase; NOS-ter; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               뮍
                                                       This is the nucleotide sequence of the Agrobacterium tumefaciens ipt gene that codes for isopentenyl transferase (see AAW81575), an enzyme of the cytokinin biosynthetic pathway. A claimed DNA construct comprises either an isopentenyl transferase or a tryptophan oxygenase (see AAW81574) encoding sequence, operably linked to an ovary or developing fruit-specific plant-expressible promoter (see AAV69755 and AAV69755). The construct is used to stably integrate enzymes involved in cytokinin or auxin biosynthesis into the plant genome to achieve a transgenic plant (preferably tomato, cucumber or watermelon) producing seedless fruit in the absence of pollination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isopentenyl transferase; ipt gene;

```

The invention describes a method of manipulating senescence in a plant comprising introducing a genetic construct that includes a myb gene promoter linked to a gene encoding an enzyme involved in biosynthesis of a cytokinin, where both the promoter and the gene may be used as clearly of senescence is used to increase shelf life of fruits, flowers, cleaves and tubers in hoRticultural produce and cut flowers, reduce perishability of horticultural crops, improve carbon fixation (and thus yield, including biomass in forage crops) and increase seed production. CC Use of the myb gene promoter (unlike other promoters used for overexpression of the cytokinin biosynthesis gene) does not cause created root and shoot growth, failure of root formation, reduced apical dominance and reduced leaf area. This sequence represents the CC Agrobacterium tumefaciens isopentenyl transferase (ipt) gene, the product con failure is involved in cytokinin biosynthesis. control Claim 7; Fig 2; 27pp; English of myb gene promoter. reduced apical reduce on (and thus the product O.F

                                                                            The inventors claim a vector contg. a transformation-inducing principle (TIP) gene from Ti plasmid pTi15955. The sequence of the T-DNA of the octopine-type Ti plasmid has fourteen open reading frames bounded by eukaryotic promoters, ribosome binding sites, and polyadenylation sites. With the vectors, expression of structural foreign genes in plant cells is promoted. The gene esp. encodes an insectioidal toxin identical to or derived from the crystal protein of Bacillus thuringiensis. (Updated on 25-MAR-2003 to correct PA field.) These plasmids provide max. efficiency for transfer of foreign genes and can be amplified in the plant genome. They do not contain genes specifying tumour formation and will not spread antibiotic resistance throughout the plant population. (Updated on 25-MAR-2003 to correct PF field.)
